

AMENDMENTS TO THE SPECIFICATION:

Please replace the paragraph beginning on page 6, line 28 with the following replacement paragraph:

--Referring first to Figures 1, 2 and 4, a moveable shaft coupling 21 is used for the rotationally fixed connection of two drive shafts 75 and 76 which with respect to their central axes 39-39 and 55-55 may assume a bending position forming a bending angle 77 or a straight position with their central axes being aligned coaxially. Shaft coupling 21 is arranged as tripod joint for transmitting a driving torque between two driving elements, e.g., 75, 76 of a drive train.--
